

BEFESA

annual report **2007**

For a sustainable world...
we recycle industrial waste,
we generate and manage water.

Befesa is an international company specialized in industrial waste management and water management and production. We manage more than 2.5 million tons of waste a year, of which 1.2 million tons are utilized to produce new materials by recycling, thereby eliminating emissions of more than one million tons of CO₂ per year. Our desalination capacity is one million cubic meters per day, sufficient to supply a population of 4.5 million.

Befesa provides solutions for industrial waste management, as well as water management and production, in line with its social responsibility policy focused on contributing to the creation of a sustainable globe.
